L. G. S. MANI NANDANA

DATA ENGINEER | PYTHON | SQL | AWS | PYSPARK

Kakinada, Andhra Pradesh | +91-9849289789 | maninandanalolla@gmail.com

LinkedIn | GitHub

PROFESSIONAL SUMMARY

Early-career data engineer with hands-on experience in end-to-end data ingestion, ETL development, data integration, and production deployment using AWS and PySpark. Built event-driven, batch-processing workflows with data quality checks, workflow orchestration, auditing, CI/CD, and production support.

TECHNICAL SKILLS

AWS: Amazon S3, AWS IAM, AWS Lambda, Amazon SQS, Amazon SNS, Amazon Aurora, Amazon RDS, AWS Glue, AWS Secrets Manager, Amazon EventBridge

Programming: Python, SQL, Shell scripting

Cloud and DevOps: AWS CloudFormation, AWS CodePipeline, CI/CD, infrastructure as code, production deployment

Libraries and Tools: PySpark, Pandas, Boto3, SQLAlchemy, Git, GitHub, DBeaver, AWS Console

Databases: MySQL, PostgreSQL

WORK EXPERIENCE

Data Engineer Intern | DataLineage | 14 February 2026 - Present

Client: Transamerica | Cost of Care Analytics (COCA) and Health Integrations (THT)

- Develop, connect, trigger, deploy, and maintain data pipelines through production, collaborating with a senior engineer and taking ownership of implementation and ongoing support.
- Build multi-client batch ingestion from Amazon S3 and MySQL/PostgreSQL sources; preprocess and transform files, apply data quality checks for file names, required fields, and business rules.
- Orchestrate multiple AWS Glue jobs with Lambda triggers; use event-driven SQS and Lambda processing for post-processing validation, auditing, and SNS status notifications.
- Implement CI/CD pipelines with AWS CloudFormation and CodePipeline; support QA by investigating defects and resolving issues.
- Apply optimization techniques to reduce Glue job runtime and resource costs; maintain and support the pipeline in production.
- Resolve pipeline errors independently, help colleagues troubleshoot recurring issues, and take charge of project work when the mentor is unavailable.

PROJECTS

AWS Data Ingestion and ETL Pipeline | GitHub

- Developed an end-to-end ETL pipeline integrating **Amazon S3, MySQL, and PostgreSQL** to ingest and process multiple client files, implementing preprocessing, file-name validation, data quality checks, and business rule validations.
- Orchestrated **AWS Glue jobs using AWS Lambda** for multi-stage data processing and implemented **Amazon SQS-triggered Lambda functions** for post-processing validations and auditing.
- Implemented **CI/CD pipelines using AWS CloudFormation and AWS CodePipeline**, supporting automated deployments, QA testing, defect resolution, and production issue troubleshooting.
- Optimized ETL job execution to reduce runtime and resource consumption, and integrated **Amazon SNS** for automated pipeline status notifications and monitoring.

Amazon S3, MySQL, PostgreSQL, AWS Lambda, AWS Glue, Amazon SQS, Amazon SNS, CloudFormation, CodePipeline

EDUCATION

Bachelor of Computer Applications (BCA) | Pragati Degree College, Kakinada | 2023-2026 | CGPA: 8.1
